Personal Profile

CSE Graduate from Brac University and Fullstack focused specializing in Python, Django, React and DRF. Enthusiastic at architecting scalable RESTful APIs and optimizing database performance. Focused on delivering secure, high-performance server-side solutions for modern web and mobile ecosystems.

Education

2022 – 2026: BSc in Computer Science and Engineering

Brac University, Dhaka

GPA: 3.54/4.00

Thesis: Evaluating the Efficacy of Incentives in Enhancing Voluntary Blood Donation: A Behavioral and Operational Approach in Bangladesh

Supervisor: Dr. Farida Chowdhury

Projects

Reward-based Blood Donation App | *Flutter, Supabase* | 🔄 **Project**

Jun 2025 – Sep 2025

- Developed a Flutter-based Android application incentivizing voluntary blood donations through a gamified reward system.
- Implemented a point-based economy where users earn credits for donations, redeemable during medical emergencies.
- Integrated **Supabase Real-time Database** for seamless data synchronization and user authentication.

PaperTrails: Second-hand Book Marketplace | *Django, SQLite* | 🔄 **Project**

Feb 2025 – Jun 2025

- Built a comprehensive web platform for posting, borrowing, searching, and reviewing second-hand books.
- Followed **Agile Methodology** across three sprints, utilizing **GitHub** for version control and **Jira** for task tracking.
- Designed robust backend logic using Django to handle complex book-lending workflows.

Biblioteca: Online Library Management | *Spring Boot, React, PostgreSQL*

Oct 2024 – Jan 2025

| 🔄 **Project**

- Developed a full-stack library management system with a **Spring Boot** RESTful backend and **React (TypeScript)** frontend.
- Managed development via Agile sprints, focusing on modular architecture and optimized **PostgreSQL** schema design.

Gachmistri: Plant Marketplace Platform | *Django, React.js PostgreSQL, Docker* | 🔄 **Project**

2026 – Present

- Building a full-stack plant buying/selling platform with **Django** backend, **PostgreSQL (Neon)** database, and third-party plant API integration for dynamic catalog management.
- Implemented complete authentication system including **Google OAuth** and containerized the application using **Docker** with **uv** for dependency management.
- Developing a **RAG-powered** AI assistant using **pgvector** on Neon PostgreSQL to provide plant care tips and species-specific advice without a separate vector database and , shopping cart with session-safe PRG pattern.

Accomplishments

GitHub Foundations | DataCamp Certificate #796,246

Feb 20, 2026

Data Manipulation with pandas | DataCamp Certificate #44,309,328

Feb 15, 2026

Skills

Languages: HTML, CSS, JavaScript, Python, C/C++, Dart, SQL

Frameworks & Libraries: Django, Django REST Framework (DRF), React.js, Next.js, Tailwind CSS, Flutter

Databases & Cloud: PostgreSQL, MongoDB, Neon, Supabase, pgvector

AI & Data: RAG, Pandas, NumPy, Data Preprocessing, Data Visualization

Tools & OS: Linux (Ubuntu), Git, Github, Docker, Jira

Problem Solving: Codeforces, UVjudge

Deployment: PythonAnywhere, WSGI, Linux/Bash, Environment Variables, Vercel
